

# 5 Great Ways to Lead the Field...

## Performance

- Player safety and performance is improved—a fast field to run on, a softer field to fall on. We call it “safety without sacrifice.”
- Provides proven G-max performance that other bases can't give, and maintains it over time.
- Provides necessary stability and “grab” to prevent turf markings from moving.

## Cost

- Total cost certainty—one price, no change orders. Stone cost varies from day to day.
- No stone inspection costs, sourcing time, transport issues, supplier delays.
- Faster installation means less time and money.

## Environment

- Brock Performance Base™ reduces energy use by *half* when compared to a stone base.
- A Brock base results in less site and neighborhood disturbance.
- Water that passes through Brock passes the most stringent water quality tests in both the U.S and Europe.

## Drainage

- Gives you faster, more reliable drainage on your field without elaborate drainage systems. The Brock drainage system has never failed.
- Brock will not “over-compact” or settle over time which clogs drainage.

## Quality

- Proven with the most extensive research and number of installations in both the U.S. and Europe.
- Brock is a manufactured base made in an ISO certified factory. A consistent, predictable field outcome is guaranteed.
- Get a flatter field – Stone and plastics can move, causing undulations in the field. Brock bridges small imperfections in the base giving you “table top” planarity, and it won't change over time. Plus Brock provides equivalent subgrade stabilization and better insulation against frost heave than a traditional stone base.
- Backed by a 10-year warranty, with an expected life of over 25 years.
- Made in the USA.
